Various guy wired tower types can be considered for your **Winglette** wind generator. They are tubular towers, lattice towers, and pre-stressed concrete towers. A well designed guy wired tower, can be superior in strength, reliability, and tower cost, if compared with a stand alone tower.

The guy wired, lattice galvanized steel towers of the **Winglette** wind generator, are manufactured using bolted steel profiles. The anchors and guy wires secure **stability** and **strength**.

Advantages of lattice guy wired towers:

- Their design is popular for small wind generators.
- Tower **heights** available from 12m(40ft) to 30m (100ft).
- They **weigh less** than stand alone towers.
- They have increased **stability** at heights exceeding 18m.
- Any possible defects can easily be inspected for.
- Installation is a fast, but technically sophisticated.
- They have huge **savings in cost** when compared to similar stand alone towers.
- They have **less wind shade** than solid type towers.
- They are relative inexpensive to manufacture.
- Manufacturing is uncomplicated relative to tapered stand alone towers.
- They can be easily **hot dip galvanized**.
- They are equipped with **climbing ladders** and **cable brackets**.
- The **Winglette** guy wired towers has the option of special anchors that elevate guy wire connections off ground level.
- Where **tower height is necessary**, they are a prime alternative to consider.

Winglette's guy wired lattice towers, with their light weight design, and combination of excellent stability and strength, is well suited for sites where height is required, guy wired anchors will not interfere with movability of vehicles or

machinery.
